Job Success

LaTeX Guru, Static Webmaster, Sass Wizard, Unix Geek, CSS Grid Goblin

HI, welcome to my UpWork page!

Precis:
[*] I make beautiful things (using Sass, HTML5 and JS)
[*] Optimize websites (Page rank in guarantee) using the static web
[*] I produce re-usable LaTeX, LaLaTeX, LuaTeX and LuaLaTeX documents and Beamer presentations(over multi-lingual ones)
[*] I work in teams using version control (git or svn) for collaboration
[*] I have a passion for the static web (Jekyll, Hugo, Jed/file, etc) and open source projects
[*] I write creative and factual stories (award winning)
[*] Edit and proofread documents (over 6 years of experience)
[*] Collaborate on research projects (as long as I get publication credits)
[*] I write resumes with professional layouts highlighting relevant skills

I'm a fledgling freelancer, I've won a multitude of awards for writing (prose) and have also shown excellence in my academic pursuits. I've often developed for the web and also maintain a variety of projects (LineageOS) for Android phones. I have a strong commitment to open source and Linux.

I love web development, and have been dabbling in it since the days before the standardize the web evolved as we know it. I have a plethora of ongoing hobby projects which I typically template and release on github (open-source). I have a flexible workflow, comfortable using most frameworks and all the latest tools (webpack2, gulp, CSS-GRID and the rest).

My focus is on designing from the basics, which is why I choose the always work with Sass (or PostCSS). I believe strongly that functional, clean, semantic, responsive design is one of the best ways to perform SEO, and I've not yet been proven wrong.

I've been writing in LaTeX and (re)LaTeX for over 5 years, typesetting documents, formulae sheets and reports, as well as making classes and templates for re-usability. I also use Beamer for making professional, elegant presentations and make magazine layouts with Pandoam.

A major reason for implementing presentations in TeX based systems is the ease of citations, which also often use and work with clients on Overleaf so they can keep track of the work I do, as I do it.

Research is my passion, and though my field of study is Chemical Engineering, I have a wide range of academic research interests including Thermodynamics, Optics and Quantum Computing. I have been featured in an international OSA Conference (Photonics-2016) with the best student paper award (DA-Iv/GoldenMR)
Additionally, my particular skill set involves LAMMPS and other molecular dynamics simulation codes (both MC, MD and DFT).

I have been writing for most of my life, mainly for awards, but a sample of my work is also linked in my portfolio, (as a newsletter which I also managed, edited and designed)

I'm highly motivated and driven to incorporate the latest practices in all my areas of expertise and am always ready and willing to innovate as I seek to actively enhance my skills with each project

I'm a strong team leader/player with great communication skills and a huge sense of commitment to any and every project I agree to work on. I'm comfortable working on tight schedules and I adjust my working hours to meet deadlines.

Further details may be found on my CV available on github. (github.com/HaoZeke/CV) link

Optimize Jekyll Site $100.00
★★★☆☆ 3.45 Mar 2017   Fixed Price
Rohit is a talented, young, developer who's ambitions got the
best of him on this contract. I needed help optimizing a small,
simple site, and instead, he built an over-engineered solution
that I likely will not be able to use.

Rohit worked hard to accommodate the many requests I had,
but in the end was not cooperative in my request to keep the
solution simple. To be fair, the technical merits of the solution
are sound, but it's not what I needed.

I would recommend Rohit for projects that are deeply technical
in nature and have specific requirements so as to keep him
focused and on-task.

Freelancer's Response
The client was provided with clear instructions on how to use the
system to set up. Additionally it was only set up that way in order
to fix specific needs. Once the technical merits of my method
over his own homebrewed solution (which wasn't working, hence
the hire) was proven he somehow took it badly and threatened
to revoke the contract. This after I respectfully declined to do
work not agreed on here on Upwork.
